01

EXECUTIVE SUMMARY

Plush Agri Solutions (PAS) is a Kaduna-based veterinary advisory and agricultural solutions enterprise founded by a veterinarian with extensive field experience working with livestock farmers and rural communities across Northern Nigeria. The organisation provides practical solutions that improve animal health, farm productivity, and the resilience of livestock-dependent communities.

Across Northern Nigeria, smallholder and semi-commercial farmers operate with limited access to formal veterinary services, resulting in preventable animal losses, reduced productivity, and avoidable economic shocks. This gap is further compounded by geographical barriers, cost constraints, and weak extension coverage, making timely animal health interventions difficult to access when they are most needed.

PAS addresses this gap by delivering a decentralised and community-embedded model that integrates veterinary support directly within farming communities. This approach is designed as a scalable community-based One Health model that recognises the strong interconnection between animal health, human health, and livelihoods in rural communities. Services include on-farm advisory visits, livestock health education, farmer training, and access to verified agricultural inputs. Communication is delivered in both English and Hausa to ensure accessibility and adoption.

By strengthening animal health systems at the grassroots level, the organisation contributes to improved productivity, enhanced food security, and reduced disease risk across livestock-dependent households.

MISSION

To improve livestock productivity in Nigeria by delivering practical, field-based veterinary advisory services that strengthen animal health, reduce disease risk, and improve farmer decision-making.

VISION

A resilient and inclusive livestock sector in Nigeria where smallholder farmers and rural livestock communities have consistent access to veterinary expertise and quality inputs that enable sustainable and productive livestock systems.

02

ABOUT THE ORGANISATION

Founding Story

Plush Agri Solutions was born from years of field experience across Northern Nigeria, where most livestock losses were observed to result not from incurable diseases, but from delayed veterinary interventions.

This reality highlighted a persistent disconnect between professional veterinary services and rural livestock systems.

PAS was therefore established to strengthen last-mile access to practical veterinary support for livestock farmers in underserved communities.

CORE VALUES

PRACTICAL	Grounded in field reality, not theory.
PRODUCTIVE	Focused on measurable improvements in livestock health and farm productivity.
TRUSTED	Built on reliable, evidence-based veterinary care.
SUSTAINABLE	Designed to strengthen long-term farmer self-reliance.

03

PROBLEM STATEMENT

Northern Nigeria’s livestock sector is a key driver of rural livelihoods and food security. However, the systems that support it, including veterinary services, extension infrastructure, and regulated input supply, remain weak and unevenly available at the community level.

This creates a persistent service delivery gap at the last mile, where farmers operate without reliable access to timely and qualified veterinary guidance.

Key Challenges

Veterinary Service Delivery Gap Limited community-level access to qualified veterinary professionals delays diagnosis and treatment.	Weak Extension Infrastructure Inadequate advisory and extension systems restrict farmers' access to structured knowledge on biosecurity, disease prevention, and improved animal husbandry practices.
Informal Input and Drug Ecosystem Unregulated veterinary drug and input markets increase exposure to counterfeit products and inappropriate antimicrobial use.	Economic Vulnerability from Preventable Losses Repeated livestock losses and productivity declines create direct income shocks for households, limiting their ability to invest and build resilience.
Public Health and AMR Risk Weak veterinary oversight and uncontrolled antibiotic use increase zoonotic disease risks and accelerate antimicrobial resistance, a growing global health threat.	

04

OUR SOLUTION / APPROACH

Plush Agri Solutions operates a community-embedded veterinary advisory system that delivers last-mile animal health services to underserved livestock communities. The model is built on direct field engagement, practical decision support, and continuous farmer interaction within a structured One Health framework.

Rather than delivering fragmented services, PAS integrates veterinary support, farmer education, input access, and data collection into a unified delivery system.

The model operates through four interconnected pillars:

A

COMMUNITY-BASED ONE HEALTH DELIVERY SYSTEM

PAS operates at the intersection of animal health, human wellbeing, and community livelihood systems. The system is embedded within local leadership structures, cooperatives, and informal networks to ensure trust, accessibility, and adoption. Field teams deliver bilingual advisory services in English and Hausa, translating veterinary guidance into practical, farm-level decisions.

B

FARMER SUPPORT AND RESILIENCE SYSTEM

The system delivers structured farm visits, on-site advisory services, disease identification support, and biosecurity guidance directly to livestock farmers. The system is designed to shift farmers from reactive treatment practices toward preventive animal health management. Each intervention is designed to strengthen farmer capacity, improve daily decision-making, and gradually reduce dependency while maintaining access to professional support when needed.

C

INTEGRATED DATA AND EVIDENCE SYSTEM

Field activities incorporate simple but structured field data collection within their advisory activities. This includes tracking disease patterns, common management gaps, and intervention outcomes at the community level. The system generates actionable field intelligence that informs programme design, strengthens accountability, and supports engagement with development and government partners.

D

CAPACITY BUILDING AND KNOWLEDGE TRANSFER SYSTEM

Continuous learning and training platforms for farmers, para-veterinary workers, and community stakeholders, which include monthly farmers' forums, structured training sessions, and targeted awareness campaigns on priority livestock health issues. The system is designed to be practical, locally relevant, and immediately applicable in field settings.

05

EMERGING IMPACT AND FIELD EVIDENCE

Plush Agri Solutions is in an active implementation phase where field delivery is being strengthened alongside the gradual development of a structured Monitoring and Evaluation (M&E) system. This system is designed to support baseline and end-line assessments, standardised field data collection, and consistent outcome tracking across interventions. The objective is to shift from activity-based reporting to measurable evidence of impact at the community level, particularly across animal health outcomes, farmer decision-making practices, and livestock productivity indicators.

Field-Level Outputs**Farm Advisory Delivery**

PAS is delivering on-site veterinary advisory services across targeted farming communities, including disease identification support, treatment guidance, and biosecurity recommendations for smallholder and semi-commercial farmers.

Established Farmer Engagement Channels

The organisation maintains ongoing engagement with farmers through forums, field visits, and interactions that support knowledge exchange and strengthen trust at the community level.

Capacity Building and Training Delivery

PAS is delivering training sessions for farmers, para-veterinary workers, and community stakeholders on animal health management, antimicrobial resistance awareness, and preventive livestock practices.

Institutional and Partner Engagement

PAS collaborates with non-governmental organisations and private sector stakeholders to support advisory delivery, training activities, and agricultural input access. Key partnerships include ASVIOL Support Initiative in community-based programming and Alraj Agro Enterprise in improving access to quality agricultural inputs within farming communities.

Input Access and Quality Assurance Support

Through trusted supply partnerships, PAS facilitates access to quality agricultural inputs, reducing farmer dependence on informal and unregulated supply channels.

06

TARGET BENEFICIARIES

The organisation serves a clearly defined, tiered beneficiary ecosystem across livestock value chains in Northern Nigeria. The model supports both primary livestock producers and system actors who influence animal health outcomes and service delivery.

Primary Beneficiaries

SMALLHOLDER LIVESTOCK FARMERS	Farmers are managing small livestock holdings with limited access to formal veterinary services. They benefit from practical advisory support, animal health guidance, and community-based engagement delivered through field visits, cooperative networks, and bilingual communication in English and Hausa.
SEMI-COMMERCIAL FARMERS	Livestock producers transitioning toward structured and market-oriented operations. They benefit from consistent veterinary guidance, preventive health management, and reliable access to quality inputs that increase productivity and reduce disease risk.
COMMERCIAL LIVESTOCK FARMERS	Large-scale livestock producers require professional veterinary oversight, structured herd health management, risk control measures, and reliable input supply systems. They value technical expertise, documented processes, and consistent service continuity.

Secondary Beneficiaries

FARMER COOPERATIVES AND GROUPS	Organised farmer associations and producer networks seeking advisory services, structured training, and coordinated access to agricultural inputs. This includes livestock producer groups, breeder associations, poultry and pig farmer networks, and other community-based agricultural organisations. These groups provide an effective channel for collective engagement, knowledge transfer, and service delivery at scale.
RURAL AGRICULTURAL COMMUNITIES	Farming communities where livestock production serves as an important source of livelihood and household income. Engagement is anchored through traditional leadership structures, local gatekeepers, and other trusted community networks to support participation, trust, and long-term adoption of improved animal health practices..
DEVELOPMENT PARTNERS	Non-governmental organisations, implementing partners, and development agencies working in agriculture, food security, livestock development, and public health. These Organizations engage with PAS for advisory support, training, field implementation and community-based delivery, leveraging its technical veterinary expertise, local access, and growing evidence-driven approach.

07

GEOGRAPHIC FOCUS

Current Pilot Area

Plush Agri Solutions currently operates in Kaduna State, Nigeria, with primary field activities anchored in Danhonu 1, Chikun Local Government Area. The community serves as the initial implementation site for the organisation's veterinary advisory model, farmer engagement approach, and field data systems.

The pilot phase is focused on strengthening service delivery, building community trust, and establishing structured veterinary advisory and farmer support systems at the grassroots level.

Phased Growth Strategy

The PAS expansion strategy is phased and evidence-led, designed to scale only after field systems have been tested and refined at the community level.

- **Phase 1 (Current):** Establish operational credibility and refine field systems in Danhonu 1, including advisory delivery, community engagement, and data collection processes.
- **Phase 2 (6 to 12 months):** Expand to at least six communities across Chikun and one additional Local Government Area in Kaduna State, leveraging existing farmer networks, community leadership structures, and local stakeholder relationships.
- **Phase 3 (1 to 3 years):** Expand operations to selected communities across three to five Local Government Areas in Kaduna State through strengthened implementation systems, strategic partnerships, and standardised service delivery processes.
- **Phase 4 (3 to 5 years):** Replicate the PAS model in selected communities across Kaduna State and one additional northern Nigerian state through partnerships, documented field evidence, and a proven community-based One Health delivery framework.

08

ORGANISATIONAL STRUCTURE

Plush Agri Solutions operates a lean, field-focused structure designed to support direct community engagement, operational efficiency, and responsive service delivery. The organisation is currently founder-led, with implementation activities supported by field and technical contributors engaged across animal health services, training, community engagement and program delivery functions.

As the organisation grows, its structure will evolve to strengthen operational capacity, technical delivery, and program management while maintaining a strong field presence.

FOUNDER / EXECUTIVE LEAD**Dr. Rukayyah Abdulsalam**

Provides overall strategic leadership, technical oversight, and direction for organisational growth and field implementation. As a veterinarian with experience across animal health, public health, community engagement and development programming, she leads the design and delivery of the organisation's field-based initiatives while guiding partnerships, operational development and long-term strategic planning.

PROGRAMME AND FIELD OFFICERS <i>Responsible for delivering animal health, coordinating community engagement activities, and supporting field implementation across target locations.</i>	DATA AND RESEARCH TEAM <i>Supports field data collection, documentation, reporting, and monitoring activities to strengthen evidence generation, accountability and organisational learning.</i>	COMMUNITY FACILITATORS <i>Support farmer engagement, community mobilisation, and local communication efforts, ensuring information is delivered in culturally appropriate and accessible formats, including English and Hausa where required.</i>
--	--	---

TECHNICAL ADVISORY NETWORK
Comprises veterinary, agricultural and development professionals engaged on a needs basis to provide technical expertise, programme design support, and implementation guidance across the organisation's activities.

09

SUSTAINABILITY MODEL

Plush Agri Solutions operates as a hybrid veterinary and agricultural solutions enterprise designed to balance financial sustainability with community impact.

The organisation is currently in its implementation phase, with consulting services and agricultural input supply serving as its primary revenue streams. These are complemented by training and capacity-building engagements delivered to farmers, cooperatives, NGOs, and development partners.

Additional sustainability pathways include grant funding, institutional partnerships, and commissioned programme delivery, which support organisational growth and the expansion of field operations. This diversified model strengthens operational resilience while enabling continued investment in livestock health, farmer capacity, and community-level service delivery..

10

CALL TO PARTNERSHIP

Plush Agri Solutions welcomes collaboration with government institutions, development partners, NGOs, research organisations, private sector actors, and investors committed to strengthening livestock health systems and improving outcomes for farming communities.

We welcome partnerships that align with this vision and support the expansion of accessible, evidence-informed animal health services across underserved livestock communities.
